Solo

MUSIC

ALL THE MUSIC, ALL IN ONE

We understand that people want convenience and elegance when it comes to listening to music. We also believe that the Solo music is the perfect solution for people who want the performance offered by high end stereo separates without the hassle of additional wires and space that separate components require. It has massive power on tap when the music demands it but it always stays in control effortlessly.

When it comes to listening to music, it is the purity of the sound quality that counts.

Some audio systems may provide convenience – from networked speakers at home, mobile headphones and portable Bluetooth speakers for when you’re on the move. But while many systems claim amazing reproduction, they don’t deliver on their promise – the true essence of the musical performance is lost.

The new generation Solo Music sets new standards of reproduction for an all in one system.

The Solo Music can drive any loudspeaker on the planet with grip and control. It has a massive power supply that can deliver detailed and controlled sound that never loses its grip on the music. It can transform the sound you get with speakers you may already own or provide the heart of an exceptional sound that can turn your home in a venue where music lives.

Arcam has been making world class hi-fi for 40 years. We design products that deliver exceptional sound quality but come with a look that is stylish but restrained. Their understated good looks can grace an ultra- modern environment or enhance a more traditional style home.

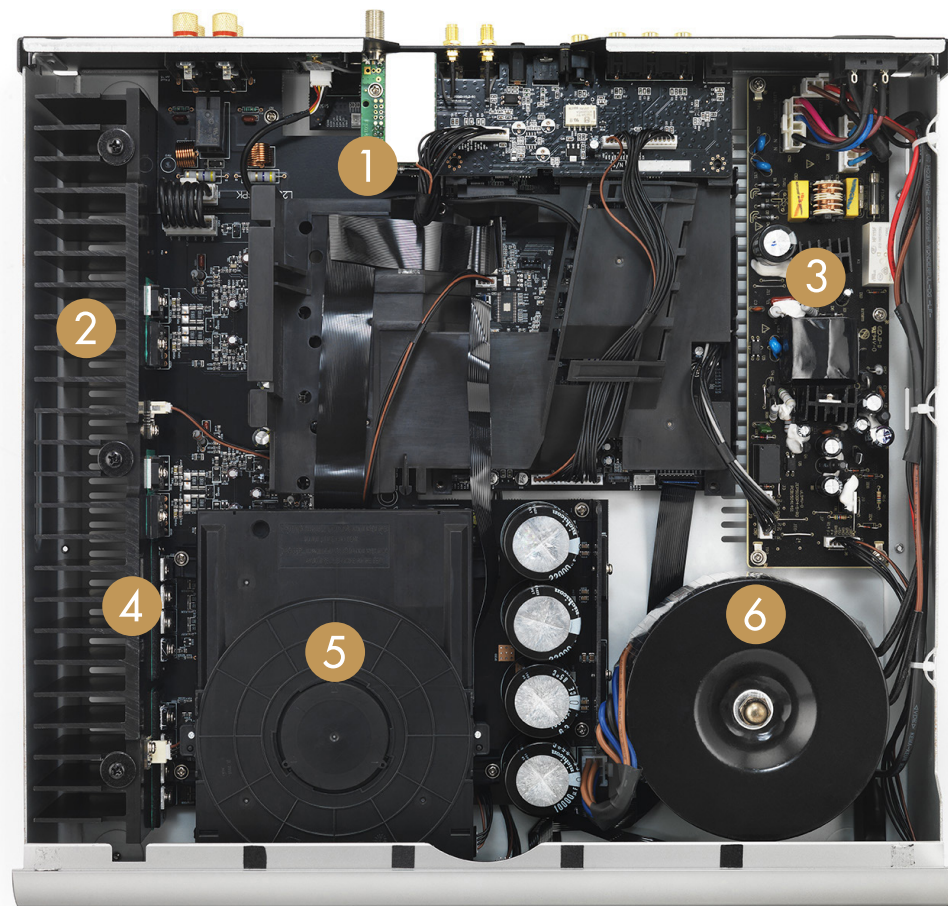

Class G amplification has been developed to produce amazing amounts of pure power but with high levels of efficiency. The 2 stage power supplies offer a wonderful combination of ultra- low distortion when operating at normal levels while capable of utilising the higher voltage stage to produce effortless power for those times when you've just got to play it loud.

At Arcam we believe it is the absolute level of audio performance that matters, and that means a natural and accurate portrayal of the original recording. Our mission has always been to reproduce music to a level of fidelity so pure that the sound transmits the joy and wonder that the world's best musicians can deliver.

To that end we have spent 4 decades honing our audio engineering skills and have produced products that have won more accolades than any other company in our sector.

Arcam has a worldwide reputation for making amplifiers that are transparent and natural but can drive speakers with power and control. Our highly evolved amplifier technology lies at the heart of the Solo Music. Over seven years in the making, our class G amplification in our AV and stereo amplifiers now debuts in the solo range and, in addition, will reveal just how much progress has been made by our engineering and design team.

The original Solo range set new standards for all in one music systems and won numerous awards and rave reviews. Now it's time to raise the bar yet again.

1 DAB/FM
 Arcam has made high performance tuners for more than 35 years and produced the world's first DAB(Digital Audio Broadcast) tuner in 1999.

2 HEATSINK
 The huge extruded aluminium heatsink is designed to cope with massive power delivery while keeping the electronics cool for consistent and reliable performance.

3 PSU
 This bespoke designed ultra-efficient switch mode power supply enables a standby mode that consumes less than half a watt.

4 LIFTERS
 This section provides the extra voltage swing that enables the G Class amplifier to produce the extra power that is required for the peaks that come with musical crescendos.

5 SACD/CD
 The advanced loading and laser mechanism is controlled by a state of the art media microprocessor that can read SACD as well as CD.

6 TRANSFORMER
 The amplifier power supply is the heart of an audio system and we use a mighty 300VA toroidal transformer for low noise and high current delivery.

Amplifier

2 x 80W (all channels driven 8Ω)

2 x 125W (all channels driven 4Ω)

Inputs

1 x SACD/CD, 4 x HDMI, 1 x SPDIF,
 1 x optical, 1 x FM/DAB/DAB+, 1 x USB,
 1 x RJ45 (Net)/Wi-Fi, 1 x line, 1 x 3.5mm

Dimensions

W420 x H90 x D414mm

Net weight

11.5kg

The West Wing, Stirling House, Waterbeach, Cambridge CB25 9PB, United Kingdom
